

# The leading workforce security platform for manufacturing organizations.

Manufacturing businesses run extensive operations throughout the most challenging of environments — staffing complex shifts of essential workers, producing the goods that support the nation's supply chain, all while maintaining the highest safety and security standards to ensure compliance with government regulations and stakeholder demands. This is no easy task, especially during the COVID pandemic, when many operations continued despite the national crisis.

It's time to evolve to a workforce security platform. A tool that provides Next Generation Visitor Management, along with Critical Outreach & Alerts, Health & Safety Controls, and Auditing & Analytics capabilities. A tool that is flexible, highly integrated, and prepared to address your sites' evolving operational needs with real-time results.

## The solution manufacturers need.

	Watchlists	Check visitors against internal or third-party watchlists to maintain security and safety at all sites.
	Emergency roll call and alerts	Know exactly who's on what site, to support outbreak notification, contact tracing, or emergency communication responses to protect those in your workforce.
	Pre-entry health screening	Streamline on-site check-in by gathering pre-screening information before your visitors arrive, including health or vaccination attestations.
	Compliance	Meet compliance requirements, including ITAR, Soc 2 Type 2 and more, with Traction Guests' visitor management system. Secure your facility, get signed NDAs and verify information with one complete system.
	Registration management	Engage your workforce before they come on-site with our low-code registration portal. Collect and track training certifications, insurance information, liability waivers, and other forms, while support staff cohorts/scheduling requirements.
	Touchless entry	Be proactive in safety screening with <u>ZeroTouch</u> contactless access. Set up access criteria questionnaires to be completed before arrival, and have guests scan their QR code to ensure safe entry.

Traction Guest is an enterprise-grade platform that supports essential operations - protecting your facility, employees, and essential visitors. Meet compliance protocols for all individuals entering your locations and, ensure every person is safe and secure through a flexible, centralized, customizable platform.

## Multi-scenario functionality.

Manufacturing isn't just one building or location. Even within a building there may be multiple stakeholders or workflows to consider. Use our Workforce Security Platform to easily customize the workflow to your exact requirements to address language, permissions, compliance/safety protocols, escalation paths, watchlists, and more. Ensure compliance no matter how complex your environment.

## COVID-19/Pandemic tools for manufacturers.

To keep your essential business operational, you need a platform that helps safely manage entry to your facilities for any visitor.

- Multi-factor screening to include health surveys, proof of vaccination or negative COVID-19 test.
- Hygiene instructions and health protocols to maintain safe working conditions.
- Real-time data for track and tracing employees and visitors for outbreak alerts.
- Implement ZeroTouch and Frontline to reduce physical transmission vectors.
